ArmorPolymer™ Recycled Plastic Products - 1" Equipment Pads

Features:

ArmorPolymer™ 1" Equipment Pads can be used to help distribute concentrated loads over a larger surface area, increase contact footprint with lower density materials, and protect work sites from damage by heavy equipment, machinery, bulk materials, or temporary structures. These durable one inch thick solid plastic pads are made from 100% recycled polyethylene with heavy duty compressive strength, impact strength, and wear resistance properties. This environmentally friendly material will not corrode, rot, splinter, or absorb water like plywood and is a cost effective alternative to metal and other plastics. Standard sizes include radius corners, chamfered edges, and tabs or slots for load rated web slings (not included). Options can include custom shapes and sizes. See sales representative for product details, pricing, and order terms.
